

You have been diagnosed with GLAUCOMA. You must take the eye drops every day for the rest of your life OR until an Eye Doctor tells you to stop. The drops are needed to control this disease which can make you go blind unless it is treated daily.

Taking drops regularly and as prescribed is essential if you wish to save your sight.

Your prescribed medication drops and dosage is as follows:

- Xalatan                                    1 drop in affected eye at bedtime
- Travatan                                   1 drop in affected eye at bedtime
- Lumigan                                    1 drop in affected eye at bedtime
- Duotrav                                    1 drop in affected eye in morning
- Betoptic S                                one drop in affected eye in the morning and one drop at bedtime
- Azopt                                        one drop in affected eye in the morning and one drop at bedtime
- Cosopt                                      one drop in affected eye in the morning and one drop at bedtime
- Combigan                                 one drop in affected eye in the morning and one drop at bedtime
  
- RIGHT EYE
- LEFT EYE
- BOTH
